Improving Indoor Air Quality

Above Left: Milliken Showroom, New York, New York

Above Right: Arabian Library, Scottsdale, AZ
(IIA / Metropolis Smart Environments Award Winner)

Indoor Air Quality (IAQ) is one of the top five environmental health risks related to buildings. Milliken supports green buildings with groundbreaking advances that address IAQ:

- PVC-free carpet introduced in 1986.
- All products certified carbon neutral and to Green Label Plus.
- Adhesive-free TractionBack® installation eliminates VOCs.
- None of our products require floor sealer.
- MilliCare® Textile and Carpet Care removes VOCs.

On average Americans spend 90% of their time indoors, according to the EPA. With the largest textile research facility in the world, Milliken explores and implements innovations for healthier interiors. We recognize small modifications have significant results.

Milliken introduced PVC-free carpet tiles in 1986 as an outcome of LCA. To date, this change has kept more than a billion pounds of PVC out of production. In addition, our PVC-free First Appearances® entryway system can trap 95% of tracked soil at building access points before it enters the building. First Appearances improves safety while saving on maintenance and lengthening the life of interior finishes.

All collections are certified carbon neutral by the

respected Leonardo Academy without purchased credits. All Milliken carpet also maintains Green Label Plus certification from the Carpet and Rug Institute, a distinction awarded to products emitting very low levels of VOCs.

Bio-based TractionBack®, our adhesive-free modular installation system, eliminates off-gassing and Volatile Organic Compounds (VOCs) to improve IAQ while reducing waste, time and expense. This remarkable high-friction coating applied to carpet tile backing during manufacturing prevents lateral movement, even in high-traffic areas. Yet tiles lift easily for under floor access or replacement. Installation is simple, safe and quick.

MilliCare's dry, non-toxic cleaning system removes dirt and up to 99% of pollutants and harmful VOCs (Volatile Organic Compounds) when used with a properly functioning HVAC system. The MilliCare system also meets the California Code for low VOCs, plus Green Seal and CRI Seal of Approval certifications. MilliCare also may contribute to LEED.
